DETAILED ACTION

Election/Restrictions

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claim 1-39, 50-54, drawn to integrated circuit having fully-decoded array of memory cells including multiple word lines selection and signal comparison, classified in class 365, subclass 189.07.
- II. Claim 40-49, and 55-68, drawn to Integrated circuit memory array with test mode operation, classified in class 365, subclass 201.

The inventions are distinct, each from the other because of the following reasons:

Inventions II and I are related as subcombinations disclosed as usable together in a single combination. The subcombinations are distinct from each other if they are shown to be separately usable. In the instant case, invention II has separate utility such as an integrated device having test mode operation. See MPEP § 806.05(d).

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).
